Introduction

Website

My website will be called Bikes 4u, it's a website that sells, repairs, and rent bicycles. To make websites, I will use different range f colours and pictures for the consumers to understand better. I will provide range of information for the consumers.

The purpose of the website is to sell, repair and rent bicycles. On the website people can visit and look for variety of choice. Purpose of the website is to provide customer service and open successful business.
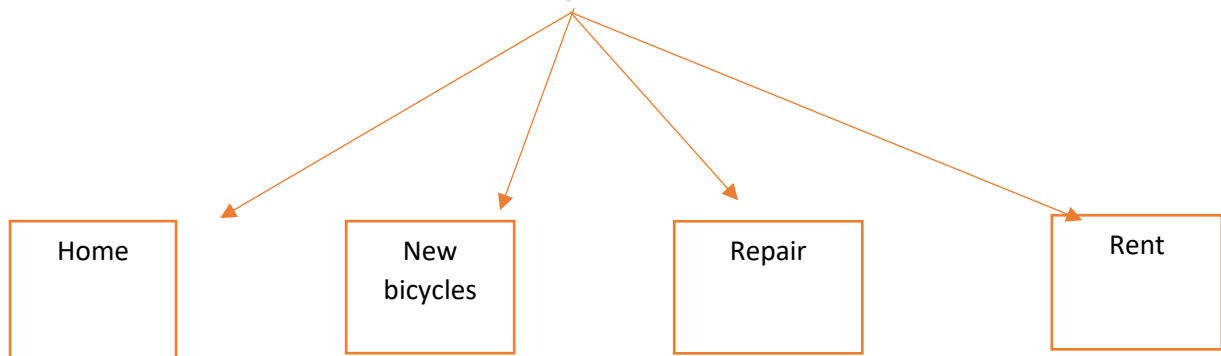

The target audience are most likely people who are aged 30-50, cycling is a good exercise for older people, cycling keeps them fit and healthy. So, our target is to reach people who are willing to exercise by cycling.

User requirement

For the consumers, to use the website more smoothly I have created different channel panels, so they can click it and go to different pages just by one click.

Annotation

This is the "home page" for my website, the home page is there for the consumers to understand more about our business, and make it easier for them to know what were based on.

This is my "new bicycle" page for the website. This page is to show our new bicycles to the customers. This page was created to make it easier for the people who are looking for new bicycle so they can see our product just by a click.

Repair

This is the "repair page" of my website that I created for the customers who wants to repair their bicycles.
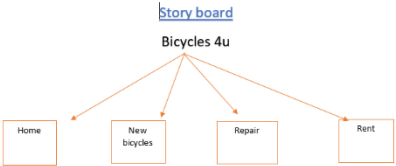

This page was created to make it easier for the consumers who are visiting the website for repairing, they can just click the button and go straight to the repair page.

Rent

This is "rent page" for our website that I created for the people who are trying to rent bicycles from our website. This page will make it easier for the consumers, they can just click the button and go straight to the rent page which will make their life easier just by a click.

Test Plan

Project Name: IT class room

Task	Expected result	Actual result	Error messages	Screen Capture	Action
Storyboard	I had to explain how my website will look like, I had to show different panels of the website.	Covered everything	None		
Create a website	I had to a website; the website will be based on selling bicycles.	Covered everything	None		

Feedback

Atekur: Atekur suggested me that my website has very dark background and he asked if I can make more lighter

After creating my website, I had some feedback from my classmate. The feedback was, I could have put some more details on the website. The pictures were nice and easy to understand.

Mustafa: The panels to go different pages were good it will make it easier for the consumers. The pictures were clean. One thing that I could have put is the contact details, how they can contact the customer's service.

Evaluation

for this unit, 1st thing I did was create an asset table. I created the asset table to show the content I will use for my website design. I showed all the pictures and I have given the link of the picture I used in the website.

2nd, I have created a story board to show my design of my website. The storyboard was my plan, I created the story board and created my website to help my self to plan about the website.

After that I have created my own website using visual studio code, mu website was based on a bicycle market place. My goal was to sell bicycle and let the people know about what my website was about. On the feedback I have taken from some of my classmates it shows that I was able to do that.

After creating my own website, I have taken some feedback and I had some positive and negative feedback from, there was somethings that I could have added more.

After that, I created a word document for annotation, I took screenshots from my website and annotated each picture to show what was the picture about. I explained everything about the pictures.
